

## How to embed a Watch2Gether room into another website:

1. Create an account (*if you don't have one yet*) on <http://www.watch2gether.com> and login.
2. Create a new room.
3. In the room, click on the "Menu Icon" in the top right corner and save the room with a name of your choice. (*This step ensures that the room is persistent and will not be deleted after a day*)
4. The address of the room looks like in the following example (*use your own url here*):

```
http://www.watch2gether.com/rooms/testroom-f5i5xnkd32323xxamq
```

If you add the parameter "?app=1" to the url, the room will be displayed with the embed layout.

```
http://www.watch2gether.com/rooms/testroom-f5i5xnkd32323xxamq?app=1
```

5. Use this url to create an iframe in the page you want to embed the room in.

```
<iframe src="http://www.watch2gether.com/rooms/testroom-f5i5xnkd83yxxamq?app=1" width="400" height="620" frameborder="0">
```

### Notes:

- You can change the "*height*" and "*width*" values of the iframe.
- You can use „*https*“ in the room url to enable SSL encryption.
